

Federal Bureau of Investigation (FBI) Prevention of Information Technology Obsolescence (PITO)

Desktops, Laptops, Printers, Scanners, Storage and Accessories

Type: Indefinite Delivery/Indefinite Quantity (ID/IQ)
Contract Number: J-FBI-08-042
Authorized Buyers: All FBI organizations

The PITO Contract:

The PITO contract was established to refresh existing information technology equipment deployed in FBI Headquarters and Field Offices, as well as allow for improved and advancing technology acquisition by FBI organizations.

PITO enables all FBI organizations to procure standard, non-mainframe IT hardware and enables the Information Technology Operations Division (ITOD) to identify, schedule, and replace (refresh) operational IT hardware to avoid obsolescence. It establishes a "Standard Technology Refresh" replacement desktop for use by the FBI in its Top Secret, Secret and Unclassified enclaves.

Benefits

PITO Contract

- No Fee
- Pre-qualified contractors
- All IT conforms with FBI target architecture and security requirements

Apptis Technology Solutions

Through established relationships with leading vendors, we provide clients with reliable cost effective technology and best of breed solutions. Our broad range of experience and technical expertise, along with industry certifications provides the highest level of support in the industry.

- Online ordering system
- Secret and top secret clearances
- Established worldwide distribution system, with inventory for just-in-time deliveries
- Advanced reporting capability that includes asset tracking and desktop imaging

Online Ordering and Advanced Reporting

Through the Iron Bow Technologies Product Fulfillment System, clients can order, asset tag and image each system -- including processor information -- which enables replacement planning without doing a physical inventory.

Past Performance

In the first year of the PITO contract, Iron Bow Technologies was able to successfully meet or exceed the FBI requirements for the Phase 1, Phase 2 and other miscellaneous rollouts. These efforts included the coordinated sourcing, integration and supply of equipment from multiple manufacturers and distributors, as well as additional value added services such as operating system imaging, asset tagging of resources, custom reporting and confirmation of delivery to both CONUS and OCNIOUS locations.

Iron Bow Technologies possesses established partnerships with all leading IT security, converged networking, data center, enterprise communication, and end-user computing hardware and software manufacturers. The company's technology experts consult with clients from pre-sales through implementation, ensuring that solutions leverage industry innovations and optimize current investments. With our robust global sales and delivery infrastructure, our clients count on reliable service worldwide.

Apptis Technology Solutions

Iron Bow Technologies is a proven leader in providing intelligent full-lifecycle IT for government and industry, implementing \$600 million in technology solutions annually. The company leverages an interactive customer engagement model and premier products expertise to help customers design, acquire and build secure data center, unified communications, network infrastructure and client computing solutions.

Iron Bow Technologies values integrity and is committed to flexible and responsive customer service. The organization is a division of Apptis, a leading federal systems integrator located in Chantilly, Virginia.
