## IRON BOW TECHNOLOGIES DEPLOYABLE DATA CENTER (DDC)

### Changing the Way You Think About Data Center Transformation

Transforming data center performance doesn't have to be risky, complicated or expensive. Iron Bow Technologies can show you how to get big results with limited resources using the Deployable Data Center (DDC).

Combining vetted technologies into proven solutions, Iron Bow can show you end-to-end data center solutions in this fully functional sample environment. With the DDC you can transform data center performance with confidence and ease.

### WHAT IS THE DDC?

The DDC is a deployable suite of products that combines the best of breed storage, server, replication and virtualization technologies into a single turnkey solution. Using dependable and repeatable best practices, the DDC offers reliable and secure access to critical applications with attention to availability and ease of management.

### SCALABLE, EVEN PORTABLE

Originally developed with the military in mind, the DDC conveniently fits a complete supportable solution into two small mil-spec ruggedized cases. Yet, since the DDC is based on best practices and vetted technologies, it can also be applied in any combination and successfully scaled into full enterprise data center solutions.

### THE SERVICES YOU NEED

The DDC provides commonly needed data center services like email, web portals, database services, file/print and supporting applications.

*Iron Bow Technologies can integrate a data center in portable, deployable cases.*

## CUSTOMIZABLE

The most popular DDC combines Exchange, SharePoint, SQL, Oracle, File/Print and supporting applications. Alternatively, as an unbiased provider with certifications in all of today's leading products, we can integrate virtually any technology from any manufacturer.

## THE IRON BOW TECHNOLOGIES APPROACH: OPTIMIZE INVESTMENTS

At Iron Bow, significant results are not driven by the amount of resources; they are driven by the precise and intelligent use of resources. We work to understand data center drivers and assets. Then we leverage current investments, implementing emerging technologies that will maximize data center efficiencies.

The result: You can dramatically improve availability, flexibility and energy use by investing in the right few solutions without embarking on a complete overhaul.

## GET SIGNIFICANT RESULTS FROM LIMITED RESOURCES

- **Interactive consultation drives critical strategy and choices**
- **Proven solutions and vetted technologies**
- **Best practices**
- **Expertise in leading brands**
- **Vendor agnostic**
- **Leverage current investments**

## SEE FOR YOURSELF — WE WILL BRING THE DDC TO YOU!

Iron Bow can bring a portable DDC to your location for live demonstrations deploying critical applications in a virtualized server environment. Get first-hand experience with the DDC and talk to Iron Bow about how the solutions can apply to the challenges your data center team is facing.

Contact us today for a demo and consultation that will change the way you think about data center transformation.
