

# MALWARE ASSESSMENT

## CONTACT

Prem Iyer, CISSP/PMP  
Practice Director  
Information Security  
infosec@ironbow.com

Think about it. Right now, nearly one in four Internet-connected PCs is infected with stealth malware, delivered via the Web and equipped with the ‘remote control’ capabilities to commit cybercrimes—from DDoS and spam to identity theft and corporate espionage. FBI statistics indicate cybercrimes like these cost U.S. businesses \$67 billion—with malware as a major cause.

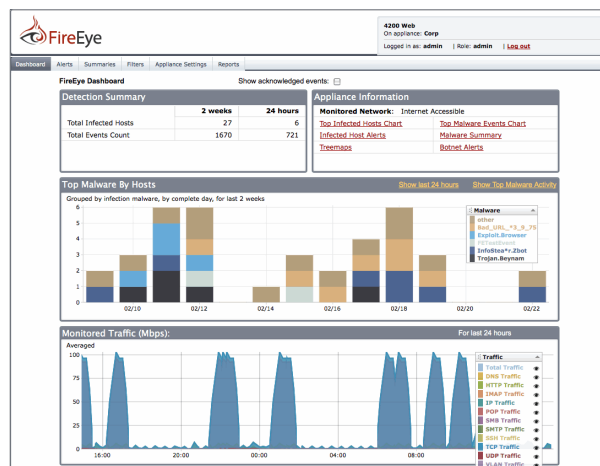

## FROM ZERO-DAY ATTACKS TO OUTBOUND CALLBACKS, STOP MALWARE IN ITS TRACKS

Isn't it time your network was secured against the threat of malware infection? An Iron Bow Technologies' Malware Assessment will help your enterprise achieve just that. Iron Bow's information security experts can reveal any existing compromised systems and share solutions for preventing future targeted zero-day attacks that easily can bypass existing network defense systems.

Shut out the threat of malware from your systems—with a Malware Assessment from Iron Bow Technologies.

While onsite for an initial assessment, your team of Iron Bow specialists will review the deployment of the FireEye Malware Protection System (MPS 4000). This advanced solution can identify existing infected networks as well as any covert call back communications or net attacks that are penetrating your existing network security systems. The Iron Bow team will go over with you how the device is deployed, where it will be installed and how it will be connected to the network. In addition, they will provide the firewall rules that need to be in place to manage FireEye from an internal desktop system.

Upon completion of the assessment, the Iron Bow team will also provide you with a fully documented report that provides a roadmap for improving your security systems against further malware attacks.

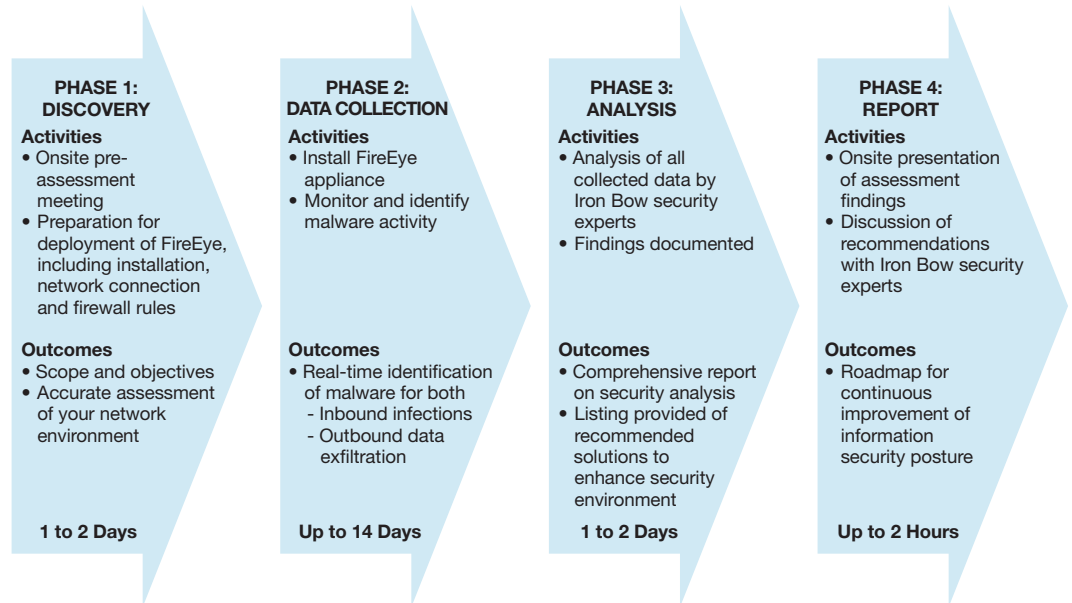

*FireEye Malware Protection System's dashboard provides a network-wide, top-down view of any undetected malware operating within your enterprise.*

## BENEFITS

- Identify previously undetected malware operating within your enterprise
- Stop infected systems from communicating back to Command and Control servers
- Stop new targeted, zero-day attacks upon the enterprise
- Gather extensive forensic data about such attacks
- Generate reports on malware infections, types, frequency and activities
- Gain insight from the expert analysis of Iron Bow's experienced security professionals

## ASSESSMENT METHODOLOGY

Trust your information security to Iron Bow Technologies—led by professionals with real-world experience in applying and managing IA programs for federal and commercial customers.

## THE IRON BOW INFORMATION SECURITY PRACTICE

Led by seasoned information security experts with hands-on experience implementing federal and commercial cybersecurity initiatives, the Iron Bow team helps identify and implement solutions that accurately align with missions, budgets and existing infrastructures to meet your risk profile. Our vendor-agnostic approach avoids cost, vulnerability and interoperability issues that can result from a force-fit solution.

Whether you need a point product or a multi-faceted solution, look to us to design, deploy or manage:

- Compliance
- Cross Domain Solutions
- Data Leakage Prevention (DLP)
- Encryption
- Endpoint Security
- Security Information Management
- Unified Threat Management
- Vulnerability Assessments and Management
