

NETWORK SECURITY AUDIT

CONTACT

Prem Iyer, CISSP/PMP
Practice Director
Information Security
infosec@ironbow.com

Viruses, Worms, Trojans—today, all are targeting your enterprise network, slipping in through remote wireless network access. These intrusions through real time peer-to-peer traffic, as well as more complex attacks by cybercriminals, are growing in number and sophistication. Unfortunately, conventional network protection solutions, such as firewalls and host-based antivirus software, often cannot keep pace.

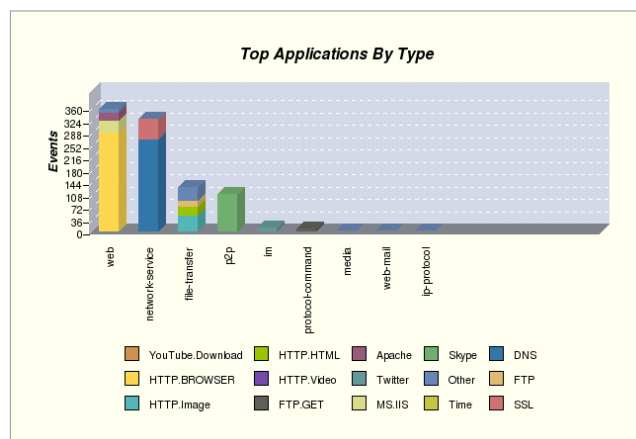

FOR THE FIRST TIME, GET THE TOTAL PICTURE ON YOUR NETWORK SECURITY POSTURE

Now you can achieve optimal network security protection with an Iron Bow Network Security Audit. In just a single engagement, we can help you optimize your network security infrastructure, identifying vulnerabilities in your current network security architecture, network topology, device configuration and security features within your specific physical IT infrastructure.

Be malware-free—
optimize your network
security with an
audit from Iron Bow
Technologies.

While onsite, the team of Iron Bow specialists will deploy FortiGate to power the data collection and analysis phase of the Network Security Audit. FortiGate is an advanced Unified Threat Management solution that can be deployed in passive mode to identify potential vulnerabilities. In addition, you will receive a full series of graphical reports on the assessment generated by FortiAnalyzer.

What's more, the Iron Bow team will provide you with a fully documented Network Security Audit report, giving you a roadmap for improving your network security architecture and migrating to next-generation Unified Threat Management technologies.

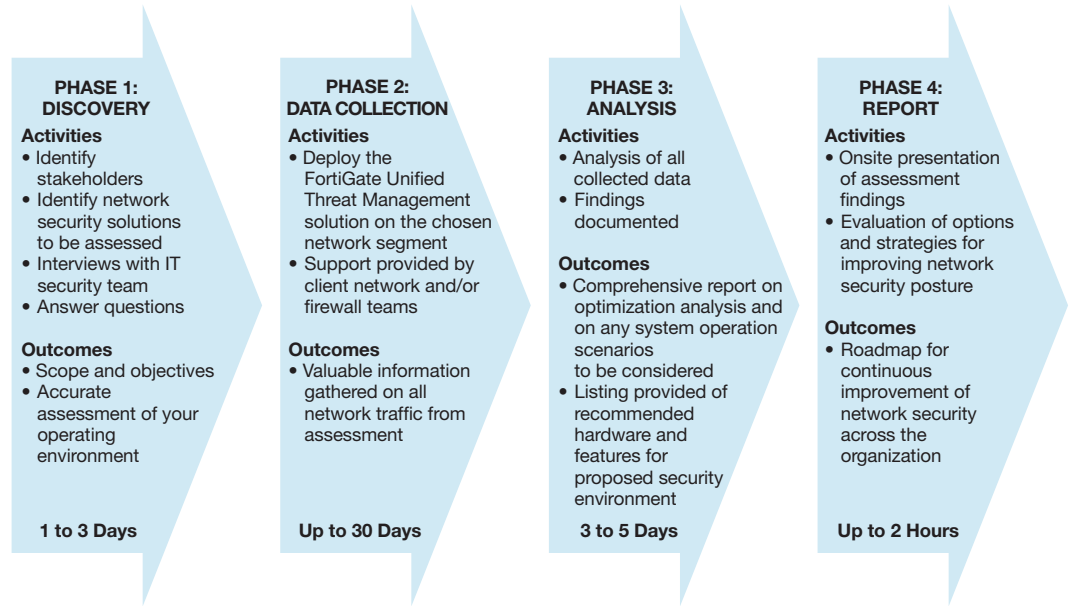

FortiAnalyzer's streamlined graphical reports provide network-wide reporting on any activities, events or trends.

BENEFITS

- Expert analysis of network security posture
- Dedicated hardware processing for deep packet analysis, content reassembly and application-level screening
- Customizable reports to identify attack patterns and comply with governmental regulations regarding privacy and disclosure of security breaches
- Proof-of-concept of a comprehensive assessment tool that speeds the ability to see and respond to threats across the enterprise

AUDIT METHODOLOGY

Trust your information security to Iron Bow Technologies—led by professionals with real-world experience in applying and managing IA programs for federal and commercial customers.

THE IRON BOW INFORMATION SECURITY PRACTICE

Led by seasoned information security experts with hands-on experience implementing federal and commercial cybersecurity initiatives, the Iron Bow team helps identify and implement solutions that accurately align with missions, budgets and existing infrastructures to meet your risk profile. Our vendor-agnostic approach avoids cost, vulnerability and interoperability issues that can result from a force-fit solution.

Whether you need a point product or a multi-faceted solution, look to us to design, deploy or manage:

- Compliance
- Cross Domain Solutions
- Data Leakage Prevention (DLP)
- Encryption
- Endpoint Security
- Security Information Management
- Unified Threat Management
- Vulnerability Assessments and Management

Contact our experts today to see how Iron Bow can streamline and fortify your information security at infosec@ironbow.com.
